

# 3N Data Load

HCS Technology developed a data loading routine to populate 3N with our student and staff data. This data routine:

- Runs nightly to collect student demographic and contact information from SASI used to populate our 3N subscription
- Ad Hoc extracts staff contact information and email addresses used to populate our 3N subscription
- Maintains listing of staff and student school locations as transfers occur

HCS Technology Development provides the critical link between our data systems and 3N, allowing our subscription to operate.
