

ESY (“easy!”)

ESY is the Extended School Year Management Application. Another joint venture between HCS Technology Development and the HCS Special Ed Department, ESY is a web based application designed to facilitate, track, and management Extended School Year services throughout the summer to meet IEP requirements.

ESY service involves meeting the requirements of an IEP by providing special ed services such as instruction, PT, OT, Speech, and more to students during the summer in order to ensure that they get the services they need.

To track service requirements, the delivery of service, payroll, travel, and management ESY was created. ESY provides:

- Allows service requests to be placed for student defining ESY services for the summer.
- Staff that perform services for students track their time in ESY by entering in service logs. Service logs are signed and reviewed and marked for payment within ESY. ESY then delivers payroll and travel information to pay the employee.
- ESY provides a series of reports which are used to management ESY services such as tracking who is not being served, how many hours are remaining, and how much ESY is costing the district.
- ESY maintains a self checkup feature which keeps administrators informed about the status of ESY services throughout the summer.
- ESY also assists staff with knowing their hourly requirements and how close they are to completion of service.
- ESY bridges the gap between payroll and staff. It speeds up processing and reduces paperwork.
