

Excent Data Services

HCS Technology Development

Excent is the special education student management system used to handle the enormous workflow behind delivering special education services within Horry County Schools. HCS Technology Development is involved with the Excent project in many ways:

- We provide the link from our student management system to the Excent database, allowing student information to flow from one system to the next in a cost and time saving way for the users of Excent.
- We provide back-end access to the Excent database in efforts to provide data for reporting solutions. Not just limited to providing enhanced reporting features for special ed., our ability to extract information from Excent has assisted with reporting district wide.
- We provide direct access to Medicaid billing data found within Excent, saving the district thousands of dollars and work hours in extracting this information. This also became a key component of our Medicaid Billing system.
- Our ability to utilize and extract data from Excent has also led to the proliferation of special education data within our own application. This includes connections to HOBOS, Track E, ESY, and a variety of district produced software.
