

# HCS Portal

Begun as an initiative to unify all HCS Development Applications behind a single web site, the HCS Portal has grown into the district’s one stop shop for applications, data, and reporting. The HCS Portal provides the holding container for all district web development behind a single login.

Developed in conjunction with Betty Owen in Accountability, the HCS Portal marks the first time that technology has sought out web design services in order to sharpen our designs and provide a nicer interface for our users. The HCS Portal also became the default template to be used for further development allowing that new design to carry over into new applications.

Still not done growing, the HCS Portal will continue to serve as the centralized login for district developed applications. The future of the HCS Portal sees continued improvement by connecting it to network logins, providing more user support, and the addition of more applications.
