

# HEALTH OFFICE DATA SERVICES

**“ WHAT CAN HCS DATA /  
DEVELOPMENT DO FOR YOU ? ”**

Health Office, a product offered by Health Master, is utilized by school nurses to track student records, track services performed, and provide Medicaid billing services. A standalone vendor application, Health Services purchased Health Office to serve the needs of nurses.

However, in order to make Health Office function, HCS Technology plays two key roles. First, the installation of Health Office is handled by HCS Technology, and HCS Data/Development is responsible for the transfer of data from our student information systems into Health Office.

In order to respond to the needs of Health Office, HCS Technology Development created the scripts, routines, and data loading procedures necessary to transfer data from our SIS system to Health Office in order to populate student information and maintain student records. This routine runs nightly to ensure that our data stays up to date within this system.

Health Office integration provides another example of how HCS Technology Development not only create applications but supports the data needs for vendor applications that are purchased for the district.
